Summer Safety Tips

Summer is quickly approaching, bringing with it travel, camping, ball games, barbecues, and more. When you and your household are fully vaccinated, you can safely enjoy many summertime activities.

Wherever your adventures take you, vaccination makes every activity safer.

Fully Vaccinated!

SAFE
Go for it!

- Explore the outdoors
- Go camping, rent a house, or visit vaccinated friends and family
- Take a road trip

LESS SAFE
Take extra precautions such as wearing a mask and social distancing

- Visiting popular destinations if they are crowded *(Outside events that allow for social distancing are best)*
- Visiting hotels, restaurants, and other business especially if indoors
- Flying or taking a train

UNSAFE
Reconsider or delay

- Avoid large events and crowds, especially indoors
- Delay travel with unvaccinated households
- Avoid travel to international destinations if you are not vaccinated

What if I'm not vaccinated?

- Our first recommendation is that you get a COVID-19 vaccine; they are safe and effective.
- If you have not been vaccinated and need to travel, take extra precautions. Get tested for COVID-19 1–3 days before your trip and 3–5 days after your trip. You should also stay at home for at least one week after travel to make sure you don't risk spreading COVID-19 in your community.
- If you travel internationally, it is recommended that you get a COVID-19 test when you return, even if you are fully vaccinated.
- For families traveling with children who are not yet vaccinated, you may need to take extra precautions depending on the activity. For outdoor activities without large crowds, no one in the family needs to wear a mask. For indoor activities with unvaccinated people outside the family, both parents and children should wear masks.

Do not travel if you are sick, test positive for COVID-19, or if you have been exposed to COVID-19.
